

FinOps Control Platform Overview

Category: Cloud

FinOps Control is our flagship cloud cost optimization platform, currently supporting AWS and Azure, providing unified cost visibility, real-time usage insights, and automated savings recommendations for client organizations.

Clients typically see up to a 40% reduction in monthly cloud spend after onboarding, driven primarily by automated right-sizing recommendations and elimination of idle or orphaned cloud resources identified by the platform.

Standard onboarding takes 3 to 5 business days, covering cloud account connection, an initial cost audit across all connected accounts, and configuration of the client's cost visibility dashboard.

The platform emphasizes fast return on investment and continuous support, with a dedicated FinOps analyst available to clients during the first 90 days post-onboarding.
