

# Structured Cabling & Certification Guide

## ***Category: StructuredCabling***

We install and certify Cat6, Cat6a, and fiber-optic structured cabling for commercial and industrial clients, with cable category selected based on required bandwidth and run distance.

Every structured cabling installation is certified against TIA/EIA standards using calibrated test equipment, with full test reports provided to the client upon project completion for their own compliance records.

Structured cabling projects for Smart City control cabinets follow the same certification process, ensuring consistent quality standards across both commercial office deployments and municipal infrastructure projects.
