

Wi-Fi & Network Solutions Brochure

Category: WiFi

We design and deploy Wi-Fi networking solutions for offices, warehouses, and multi-floor commercial buildings, including industrial-grade access point placement for large open floor plans such as warehouses and distribution centers.

A small office Wi-Fi setup for up to 20 concurrent users typically takes 1 to 2 business days, including router and access point configuration and a final coverage walkthrough with the client.

For spaces larger than 3,000 square feet or spanning multiple floors, we recommend and support mesh Wi-Fi network configurations to eliminate dead zones and provide seamless roaming between access points.

Warehouse Wi-Fi deployments typically require a dedicated site survey to account for high-density shelving, metal racking interference, and the need for reliable coverage across large open floor areas.
