

CCTV Surveillance & AMC Services Brochure

Category: CCTV

Our CCTV surveillance division offers end-to-end camera installation, monitoring, and Annual Maintenance Contract (AMC) services for commercial and residential clients.

The standard AMC plan includes quarterly on-site inspection, firmware updates across all connected devices, and complimentary repair coverage for up to two camera units per calendar year. Repairs beyond this allowance are billed at standard technician rates.

For AMC clients, our service level agreement guarantees an on-site technician response within 24 hours for critical outages such as full system downtime, and within 72 hours for non-critical issues such as a single malfunctioning camera unit.

24/7 remote monitoring is available as a separately billed add-on to any installation package and includes real-time alerting for motion events and camera tampering.

New installations are available in 2MP, 4MP, and 8MP (4K) resolution options, with 4MP being the most commonly deployed resolution for commercial retail and office sites.
