

IT Infrastructure AMC Service Guide

Category: ITInfra

Our IT Infrastructure Annual Maintenance Contract covers server hardware monitoring, quarterly preventive maintenance visits, and priority handling for all support tickets raised by AMC clients.

24/7 network monitoring with automated alerting is included in all AMC tiers above the basic plan, allowing our technical team to detect and respond to infrastructure issues before clients notice any impact.

On-site infrastructure support is available for AMC clients located within a 50 km radius of our regional service centers, with remote support available to all clients regardless of location.

We generally recommend a 4 to 5 year hardware refresh cycle for servers and core networking equipment under an active AMC, based on manufacturer warranty windows and typical failure-rate curves for enterprise hardware.
